ABOUT ME

I have been working in the fields of game development and 3D designer for about 3 years. After that, I started to develop myself in the field of Cyber Security, which is more suitable for my department and to show my skills, and where I am more interested. Regarding this, I took 4 cyber security courses on udemy. I consolidate what I learned on sites such as hackthebox and tryhackme and solve CTFs, completed more than 80 room and I am ranked in the top 1% out of all countries. I learned Linux OS, terminal commands and Networking. Also, I'm investigating OWASP top 10 vulnerabilities. I'm trying to follow and learn about current vulnerabilities. I learned a lot of pentest tools on Linux and I continue to learn new tools. I wrote scripts of netscan, network listener etc. with Python. I learned about attacks and vulnerabilities such as man in the middle, arp spoof, dns spoof, SQL injection, XSS, LFI, RFI, etc. and their logic.

I attended and successfully completed the Cyber Security Bootcamp organized by Kariyer.net and techcareer.net and I got the certificate. In this process, I reinforced the ethical hacking methodology, took lessons and training on pentest report writing and had the chance to apply it. I am also blogging all these things I learned on github. With each passing day, I add new skills to myself in cyber security, especially in the field of offensive security, apply them and continue to develop. As a computer engineering graduate, I expect to turn these skills and learnings into work experience. That's why I am looking for exciting job opportunities as a pentester in cyber security to gain work experience.
